

Bash Shell Script to print a number entered by the user

In this bash script, you will learn how to read a number entered by a user and also display it on the screen. If you want to learn more about `read` command then visit [Bash Shell Read](#)

Example: How to print a number entered by a user?

```
#Bash Shell script to print a number entered by a user
echo -n "Enter a number: "
read number
echo "You have entered: $number"
```

Output of the above program

```
Enter a number: 51
You have entered: 51
```

Explanation of the above code-

In the above program, we have used `read` command to take input from the user. The entered number is stored in a `number` variable. Finally, `number` is displayed on the screen using `echo` command.
